SUBJECT: GHANA INVESTMENT CLIMATE STATEMENT -- AUGUST 2004

UPDATE

REF: A. STATE 141379

[1B](#). 2003 ACCRA 1804

Post is pleased to provide below the mid-year (August) 2004 update of the Investment Climate Statement for Ghana.

#### A.1. Openness to Foreign Investment

Attracting foreign direct investment remains a key objective of Ghana's economic recovery program, which started in 1983 under the auspices of the World Bank and the IMF. President Kufuor, who was inaugurated in January 2001, continues to encourage foreign investment as an integral part of Ghana's economic policy. In his inaugural address he announced, "Ghana is open for business," and welcomed foreign investors.

As part of his commitment to attracting foreign investment, the President relies on advice from the Ghana Investment Advisory Council (GIAC), which was established with the help of the World Bank. The 30-member GIAC, which consists of multinational and local companies and institutional observers (IMF, WB, UNDP), helps shape government policy to create an enabling investment environment.

Ghana promotes foreign investment by sending investment missions abroad and hosting investment-soliciting events in Ghana, including the fifth African/African-American Summit in May 1999 and the third Pan African Investment Summit in September 1999. Both generated renewed interest in Ghana.

Ghana embarked on a privatization program in the early 1990s that has resulted in the sale of more than 300 of approximately 350 state-owned enterprises. Foreign firms comprise most of the bidders for these businesses. Few local investors have sufficient capital to participate in this process except as partners with foreign firms.

The Divestiture Implementation Committee is the government institution that oversees the privatization of these enterprises. Actual divestiture is usually done through a bidding process, and bids are evaluated on the basis of criteria including management skills, financial resources, and business plans. New owners are expected to build the enterprises into profitable, productive ventures, which contribute to tax revenue and increase local employment. While there has only been one new divestiture during its tenure, the Kufuor administration has publicly stated its support for continuing the privatization program.

The Government of Ghana (GoG) recognizes that attracting foreign direct investment requires an enabling legal environment, and has passed laws that encourage foreign investment and replaced some that previously stifled it. The Ghana Investment Promotion Center (GIPC) Act, 1994 (Act 478), governs investment in all sectors of the economy except minerals and mining, oil and gas, and the free zones. Sector-specific laws further regulate banking, non-banking financial institutions, insurance, fishing, securities, and real estate. Foreign investors are required to satisfy the provisions of the investment act as well as the provisions of sector-specific laws. Generally, the GIPC has streamlined procedures and reduced delays. More information on investing in Ghana can be obtained from GIPC's website, [www.gipc.org.gh](http://www.gipc.org.gh).

The GIPC law also applies to foreign investment in acquisitions, mergers, takeovers and new investments, as well as to portfolio investment in stocks, bonds, and other securities traded on the Ghana Stock Exchange.

The GIPC law specifies areas of investment reserved for Ghanaians, such as small-scale trading, operation of taxi services (except when a non-Ghanaiian has a minimum fleet of 10 vehicles), pool betting businesses and lotteries (except soccer pools), beauty salons and barber shops. The law further spells out incentives and guarantees that relate to taxation, transfer of capital, profits and dividends, and guarantees against expropriation.

Since the enactment of the GIPC law, the GoG has ceased

screening investments. The GIPC registers investments and provides all the necessary assistance to enable investors to become established. The GoG has no overall economic or industrial strategy that discriminates against foreign-owned businesses. In some cases a foreign investment can enjoy additional incentives if the project is deemed critical to the country's development. U.S. and other foreign firms are able to participate in government-financed and/or research and development programs on a national treatment basis.

The only pre-condition for investment in Ghana is financial. The GIPC requires foreign investors to satisfy a minimum capital requirement. Once this is met and all necessary documents submitted, investments are supposed to be registered within five working days. However, according to a June 2003 report by the Foreign Investment Advisory Service (FIAS), the actual time required for registration can be significantly higher (sometimes three to four times) than the required time. Although registration is relatively easy, the entire process of establishing a business in Ghana is lengthy, complex, and requires compliance with regulations and procedures of at least 5 government agencies. These agencies are: GIPC, Registrar General Department, Internal Revenue Service (IRS), Ghana Immigration Service, and Social Security and National Insurance Trust (SSNIT). This processing period often extends up to 100 days. Nevertheless, GoG reforms in this area have yielded some returns. The World Bank announced in a March 2004 report that Ghana's "Time to Start a Business" had improved by 34 percent, from 129 to 85 days.

The minimum capital required for foreign investors is USD 10,000 (for joint ventures with a Ghanaian) or USD 50,000 (for enterprises wholly-owned by a non-Ghanaian). Trading companies either wholly or partly-owned by non-Ghanaians require a minimum foreign equity of USD 300,000 and must employ at least ten Ghanaians. This may be satisfied through remitting convertible foreign currency to a bank in Ghana or by importing goods into Ghana for the purpose of the investment. The minimum capital requirement is, however, not applicable to portfolio investment, enterprises set up for export trading, and branch offices.

The principal law regulating investment in minerals and mining is the Minerals and Mining Law, 1986 (PNDCL 153) as amended by the Minerals and Mining Amendment Act, 1994 (Act 475). This law regulates investment in mining, except for small-scale mining, which is reserved for Ghanaians. It addresses different types of mineral rights, issues relating to incentives and guarantees, and land ownership. The Minerals Commission is the government agency that implements the law.

The Petroleum Exploration and Production Law, 1984 (PNDCL 84), known as the Petroleum Law, regulates oil and gas exploration and production in Ghana. The law deals extensively with petroleum contracts, the rights, duties, responsibilities of contractors, and compensation payable to those affected by activities in the petroleum sector. The Ghana National Petroleum Corporation (GNPC) is the government institution that administers this law. Several U.S. companies are involved in oil/gas exploration in Ghana at present.

There are no major sectors in which American investors are denied the same treatment as other foreign investors. There are, however, some areas where foreign investors as a whole are denied national treatment. Those sectors are real estate (non-Ghanaians may not own an interest in land for more than fifty years), banking, securities, and fishing.

#### A.2. Conversion and Transfer Policies

Ghana operates a free-floating exchange rate policy regime. There are no restrictions on the conversion and transfer of funds with documented evidence to support how the funds were gained. Ghana's local currency, the cedi, can be exchanged for dollars and major European currencies.

Ghana's hard currency needs are met largely through gold and cocoa export revenues, donor assistance, and private remittances. The fall in the world prices of these commodities in 1999 and increases in oil import bills led to a foreign currency shortage in 2000 and subsequent, large depreciation of the Cedi. The Cedi has been less volatile since early 2001 and stable since November 2002.

Ghana has no restrictions on the transfer of funds associated with investment. Ghana's investment laws guarantee that investors can transfer the following in convertible currency out of Ghana: dividends or net profits attributable to the investment; payments in respect of loan servicing where a foreign loan has been obtained; fees and charges in respect to technology transfer agreements registered under the GIPC law; and, the remittance of proceeds from the sale or liquidation of the enterprise or any interest attributable to

the investment.

With regard to offshore loans, the Bank of Ghana, Ghana's central bank, must approve the loan agreement. The Bank of Ghana inspects the terms of the loan, especially the interest rate, to see if it conforms to going international rates. There is no legal parallel remittance market for investors.

#### A.3. Expropriation and Compensation

Ghana's investment laws provide guarantees against expropriation and nationalization, although the 1992 Constitution provides some exceptions to these laws. While providing protection from deprivation of property, the Constitution sets out the exceptions and a clear procedure for the payment of compensation.

The GoG may compulsorily take possession or acquire property only where the acquisition is in the interest of national defense, public safety, public order, public morality, public health, town and country planning or the development or utilization of property in a manner to promote public benefit. It must, however, make provision for the prompt payment of fair and adequate compensation. The GoG also allows access to the high court by any person who has an interest or right over the property.

There has been no expropriatory action in recent times, and American investors have not been subject to differential or discriminatory treatment in Ghana. There are no known instances of "creeping expropriation," and there is no pattern of government action that constitutes de facto expropriation.

#### A.4. Dispute Settlement

There are currently several commercial disputes involving U.S. companies, specifically in the areas of aluminum smelting, electric power, rice production, and telecommunications. The GoG is trying to settle some of these problems, but several remain unresolved. Contracts signed under the previous government have come under renewed scrutiny by President Kufuor's government.

Ghana's legal system is based on British common law. The most important exception for the purpose of investment is the acquisition of interest in land, which is governed by both statutory and customary law.

The judiciary comprises both the lower courts and the superior courts. The superior courts are the Supreme Court, the Court of Appeal, and the High Court. Lawsuits are permitted and usually begin in the High Court. There is a history of government intervention in the court system, although somewhat less so in commercial matters. The courts have, when the circumstances require, entered judgment against the government. For example, the Supreme Court dismissed an application filed by the government in a case that involved an American agricultural trading company. However, the courts have been slow in disposing of cases and at times face challenges in enforcing decisions, largely due to resource constraints and institutional inefficiencies. There is a growing interest in alternative dispute resolution, especially as it applies to commercial cases. The Attorney General's office has drafted enabling legislation and several lawyers are providing arbitration and/or conciliation services.

The government has established "fast-track" courts to expedite action on some cases. The "fast track" courts, which are automated (computerized) divisions of the High Court of Judicature, were intended to try cases to conclusion within six months. However, there are indications that these courts are increasingly not able to try cases within this target time period. These courts are authorized to hear cases which involve banks and investors, human rights, electoral petitions, government revenue, prerogative writs, defamation, specified commercial and industrial cases, and criminal cases involving substantial public money or are a matter of extreme public importance. The government has automated the High Courts in Accra, Kumasi, and Sekondi, with 10 other courts in process.

Enforcement of foreign judgments in Ghana is based on the doctrine of reciprocity. On this basis, judgments from Brazil, France, Israel, Italy, Japan, Lebanon, Senegal, Spain, the United Arab Emirates, and the United Kingdom are enforceable. Judgments from the United States are not enforceable in Ghana at this time.

The GIPC Law as well as the Minerals and Mining Law address dispute settlement procedures and provide for arbitration when disputes cannot be settled by other means. They also provide for referral of disputes to arbitration in accordance with the rules of procedure of the United Nations Commission on International Trade Law (UNCITRAL), or within the framework of a bilateral agreement between Ghana and the investor's country.

The U.S. has signed three bilateral trade and investment agreements with Ghana: the Investment Incentive Agreement, the Trade and Investment Framework Agreement, and the Open Skies Agreement. These agreements contain some provision for investment and trade dispute settlement. Where the parties do not agree on a venue for arbitration, the investor's choice prevails. In this regard, Ghana accepts as binding the international arbitration of investment disputes. Ghana does not have a bankruptcy statute. The Companies Code of 1963, however, provides for official closure of a company when it is unable to pay its debts.

In 1996, the privately managed Ghana Arbitration Center was established to strengthen the legal framework for protecting commercial and economic interests, and to bolster investors' confidence in Ghana. The American Chamber of Commerce's (Ghana) Commercial Conciliation Center provides arbitration services on trade and investment issues.

Ghana signed and ratified the Convention on the Settlement of Investment Disputes in 1966. Ghana is also a signatory and contracting state of the UN Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the "New York Convention").

#### A.5. Performance Requirements and Incentives

Ghana is in compliance with WTO Trade-Related Investment Measures (TRIMS) notification.

Generally, Ghana does not have performance requirements for establishing, maintaining, and expanding a business. However, in its privatization of state-owned enterprises, notably the telecommunications sector, companies have to meet performance targets or they may have their licenses revoked. In the case of banks, the opening of branches requires approval from the central bank. Investors are not required to purchase from local sources. Except for free zone enterprises operating under the Free Zone Act, which are required to export 70 percent of their products, investors are not required to export a specified percentage of their output.

Foreign investors are not required by law to have local partners except in the fishing, insurance, and mining industries. In the tuna-fishing industry, non-Ghanaians may own a maximum of seventy-five percent of the interest in a tuna-fishing vessel. In the insurance sector, a non-Ghanian cannot own more than sixty percent of an insurance company. In the case of the Ghana Stock Exchange, a single foreign investor cannot own more than ten percent of any security listed. This applies to individuals as well as institutional investors. The total holding of all foreigners in a listed security cannot exceed seventy-four percent. There is compulsory local participation in the minerals and mining sector. By law, the GoG acquires ten percent of all interests in mining ventures at no cost.

There are no requirements on physical location of investments. However, there are tax incentives to encourage investment in specific locations. There are also no import substitution restrictions, but there is an export quota of seventy percent for companies operating under the Free Zone Act. The only requirement for compulsory employment of Ghanaians is that any investment in a trading enterprise must employ a minimum of ten Ghanaians.

There are regulations relating to the transfer of technology when it is not freely available in Ghana and where the transfer will exceed eighteen months. The transfer of technology is governed by an agreement under the Technology Transfer Regulations of Ghana. Any provisions in the agreement inconsistent with Ghanaian regulations are unenforceable in Ghana.

Investment incentives differ slightly depending upon the law under which an investor operates. For example, while all investors operating under the Free Zone Act are entitled to a ten-year corporate tax holiday, investors operating under the GIPC law are not automatically entitled to a tax holiday, depending upon the sector in which they are operating.

All investment-specific laws contain some investment incentives. The GIPC law allows for import and tax exemptions for plant, machinery (and parts thereof) imported for the purpose of the investment. Specifically, chapters 82, 84, 85, and 89 of the customs harmonized commodity and tariff code zero-rates (i.e., does not levy import duty) some plant, machinery, and parts thereof. An import duty rate of 5 percent was recently imposed on some items that were previously zero-rated. The GIPC website ([www.gipc.org.gh](http://www.gipc.org.gh)) provides a more thorough description of incentive programs. The law also guarantees the investor all the tax incentives provided for under Ghanaian law. For example, rental income from commercial and residential property for the first five

years after construction is exempt from tax. Similarly, income from a company selling or letting out premises is income tax exempt for the first five years of operation. Rural banks and cattle ranching are exempted from income tax for 10 years.

The corporate tax rate is 32.5 percent (the GoG has proposed a reduction to 30 percent, effective January 2005) for all sectors except: income from non-traditional exports (8 percent), income from hotels (25 percent), and income earned by companies listed on the Ghana Stock Exchange (30 percent).

For some sectors there are tax holidays for a number of years. These sectors include, free zone enterprises and developers (zero percent for the first 10 years and 8 percent thereafter), real estate development and rental (zero percent for the first 5 years and 32.5 percent thereafter), agro-processing companies (zero percent for the first 5 years and after the five years the tax rate ranges from 0 to 30 percent depending on the location of the company in Ghana), and waste processing companies (zero percent for 7 years and 32.5 percent thereafter). Tax rebates are also offered in the form of incentives based on location. A capital allowance in the form of an accelerated depreciation allowance is also applicable in all sectors except banking, finance, commerce, insurance, mining, and petroleum.

The Ghanaian tax system is replete with tax concessions that make the effective tax rate generally low. The incentives are specified in the GIPC law and are not applied in an ad hoc or arbitrary manner. The GIPC has no discretion and once the investor has been registered under the GIPC law, the investor is entitled to the incentives provided by law. The GIPC, however, has discretion if an investor is seeking additional customs duty exemptions and tax incentives.

A 12.5 percent VAT is levied on most imports, all consumer purchases, services, accommodation in hotels and guest houses, food in restaurants, hotels and snack bars, as well as advertising, betting and entertainment. The VAT collection rate will be 15 percent, starting August 1, 2004, with the implementation of the 2.5 percent Health Insurance Levy.

Ghana has no discriminatory or excessively onerous visa requirements. An investor who invests under the GIPC law is automatically entitled to a specific number of visas/work permits based on the size of the investment. When an investment of USD 10,000 or its equivalent is made in convertible currency or machinery and equipment, the enterprise can obtain a visa/work permit for one expatriate employee. An investment of USD 10,000 to USD 100,000 entitles the enterprise to two automatic visas/work permits. An investment of USD 500,000 and above allows an enterprise to bring in four expatriate employees. An enterprise may apply for extra visas/work permits, but the investor must justify why a foreigner must be employed rather than a Ghanaian. There are no restrictions on the issuance of work and residence permits to Free Zone investors and employees.

Ghana has no import price controls. It is pursuing a liberalized import regime policy within the framework and the spirit of the World Trade Organization to accelerate industrial growth.

#### A.6. Right to Private Ownership and Establishment

The laws of Ghana recognize the right of foreign and domestic private entities to own and operate business enterprises. Foreign entities are, however, prohibited by law from engaging in certain business activities in Ghana (see section 1, paragraph 6).

Private entities may freely acquire and dispose of their interests in Ghana. When a foreign investor disposes of an interest in a business enterprise, the investor is entitled to repatriate his or her earnings in a freely convertible currency.

Private and public enterprises compete on equal basis with respect to access to credit, markets, licenses, and supplies.

#### A.7. Protection of Property Rights

The legal system recognizes and enforces secured interest in property, both chattel and real, but the issue of clear title over land has been a thorny one. A thorough search at the Lands Commission to ascertain the identity of the true owner of any land being offered for sale is extremely important. Investors should be aware that land records are incomplete or non-existent and, therefore, clear title may be impossible to establish.

Mortgages exist in Ghana and are regulated by the Mortgages Decree. They are enforced by judicial sale upon application to the court. A mortgage must be registered under the Land Title Registration Law, a requirement that is mandatory for it to take effect. Registration with the Land Title Registry

is a reliable system of recording the transaction.

The protection of intellectual property is an evolving area of law. Progress has been made in recent years to afford protection under both local and international law. Ghana is a member of the World Intellectual Property Organization (WIPO) and the English-speaking African Regional Industrial Property Organization (ESARIP). The courts have been pro-active in the protection of intellectual property rights.

Steps are being taken to implement the WTO TRIPS (Trade-Related Aspects of Intellectual Property Rights) Agreement. All TRIPS-compliant legislation, except the Copyright bill, has been passed by Parliament. .

#### A.8. Transparency of the Regulatory System

The policy of trade liberalization and investment promotion adopted by the GoG is guiding its effort to create a clear and transparent regulatory system. There has been some effort to repeal laws that impede and distort investment, and the frequency of labor disputes in recent years has spurred review of labor laws. Parliament passed a new Labor Law in July 2003, which reportedly will reduce the incidence of labor disputes. The law went into effect in March 2004.

The GIPC law codified the GoG's desire to present foreign investors with a liberal and transparent foreign investment regulatory regime. To this end, the Ghana Investment Promotion Center has established a "one-stop shop" to eliminate the bureaucratic bottlenecks for investors. Under the Ghana Trade and Investment Gateway (GHATIG) Program, time frames within which government officials must perform specific duties have been set and are constantly being monitored. Implementation, however, has not always measured up to desired standards.

The GoG has established regulatory bodies such as the National Communications Authority, the Energy Commission, and the Public Utilities Regulatory Commission to oversee activities in the liberalized telecommunications, power and water sectors. These bodies are relatively new and under-resourced, which limits their ability to deliver the intended level of oversight.

#### A.9. Efficient Capital Markets and Portfolio Investment

Private sector growth in Ghana has been constrained by limited financing opportunities for private investment. Fifteen years after the beginning of financial sector reforms in 1988, much remains to be done. Confidence in the financial sector has suffered because of policy interventions by the government, many of which have not facilitated the free flow of financial resources in the product and input markets. Current high interest rates on bank loans (over 25 percent) and treasury bills (17 percent) have been a serious impediment to raising capital on the local market.

Some recent developments in the non-banking financial sector have been encouraging. Among the non-banking financial institutions, leasing companies, building societies and savings and loan associations have been innovative in serving savers and borrowers. In addition, the formulation of new regulatory policies for the Ghana Stock Exchange (which has 25 listed companies and 2 corporate bonds at the present time, and oversees portfolio investment) has been promising. The Ghana Stock Exchange (GSE) is still considered one of the best performing bourses in emerging markets. It is open to all foreign buyers and subject to the restrictions described in section 7.5, paragraph 3. Both foreign and local companies are allowed to list on the GSE. The Securities Regulatory Commission regulates the activities on the Exchange.

Banks in Ghana are relatively small. The largest in the country, Ghana Commercial Bank (GCB), has a net worth of approximately USD 50 million. Out of the 18 banks in Ghana, the GoG has a partial ownership position in GCB and fully owns two other banks. The GoG is still reviewing options regarding divestiture of its remaining interest in GCB.

Although Ghana's informal financial sector is large, with an estimated 45 percent of all private sector financial savings mobilized initially through informal channels, its capacity to serve as an intermediary between savers and investors has been limited. This is due in part to Ghanaians' savings behavior (not using the formal banking system), and in part to the absence of strong links with the formal sector.

#### A.10. Political Violence

Overall, Ghana offers a relatively stable and predictable political environment for American investors. There is no indication at present that the level of political risk in Ghana will change markedly over the near term. Peaceful and fair presidential and parliamentary elections were held in December 2000. The main opposition party, the National

Patriotic Party, led by President John Agyekum Kufuor, won the elections. This was the first time in Ghana's history in which power passed peacefully from one civilian government to another through the ballot box. Presidential and Parliamentary elections will be held on December 7, 2004.

#### A.11. Corruption

Corruption in Ghana is somewhat less prevalent than in other countries in the region, and no U.S. firms have identified corruption as the major obstacle to foreign direct investment. Companies cannot expect complete transparency in locally funded contracts, however. A 2003 Transparency International global corruption ranking placed Ghana 70th out of 133 countries in its Corruption Perceptions Index. Of sub-Saharan countries included in the survey, Ghana rated fifth least corrupt country, following Botswana, Namibia, Mauritius, and South Africa.

Ghana is not a signatory to the OECD Convention on Combating Bribery. It has, however, taken steps to amend laws on public financial administration and public procurement. The public procurement law, passed in January 2004, seeks to harmonize the many public procurement guidelines used in the country and also bring public procurement into conformity with WTO standards. The new law aims to improve accountability, value for money, transparency and efficiency in the use of public resources. A Freedom of Information bill developed by civil society may also be passed to allow access to public information.

American businesses have reported being asked for "favors" in the past. It is easy to make friends in Ghana who can facilitate business transactions. In return, these friends may ask for favors, some of which may conflict with U.S. business ethics or laws. U.S. business visitors should make clear that U.S. companies operating abroad are subject to the Foreign Corrupt Practices Act of 1977.

Commercial fraud in the form of scams, especially in gold or currency deals, is on the rise in Ghana. These are commonly termed "419" scams. While these cases are exceptions and not the rule to doing business in Ghana, U.S. potential gold buyers are strongly advised to deal directly with the Precious Minerals Marketing Company (PMMC) in Ghana. Gold can be exported from Ghana only through the PMMC. U.S. firms can request a background check on companies and individuals with whom they wish to do business, using the U.S. Foreign Commercial Service's International Company Profile (ICP) Service. Requests should be made through the nearest U.S. Department of Commerce U.S. Export Assistance Office. For more information, visit [www.export.gov/cs](http://www.export.gov/cs).

The GoG has publicly committed to ensuring that government officials do not use their positions to enrich themselves. Official salaries are modest, especially for low-level government employees. GoG employees frequently ask applicants for licenses and permits for a "dash" (tip).

The 1992 Constitution provided for the establishment of a Commission On Human Rights and Administrative Justice (CHRAJ). Among other things, the Commission is charged with investigating all instances of alleged and suspected corruption and the misappropriation of public funds by officials, and to take appropriate steps, including providing reports to the Attorney-General and the Auditor-General, in response to such investigations. The Commission has a mandate to prosecute alleged offenders when there is sufficient evidence to initiate legal actions. In 1998, the GoG also established an anti-corruption institution, called the Serious Fraud Office (SFO), to investigate corrupt practices involving both private and public institutions. SFO's 1999 report to the President and Parliament reported cases of economic fraud that resulted in over USD 2 million in losses to the country. The SFO has called for a national debate on how to deal with largesse acquired through economic crimes since the present punishment of dismissal and imprisonment is an inadequate deterrent. The GoG has announced plans to streamline the roles of the CHRAJ and SFO, in order to remove their duplication of efforts.

President Kufuor has declared a "zero tolerance" for corruption. He has established an Office of Accountability to oversee the performance of senior government functionaries. Several corruption prosecutions are underway against former officials of the Rawlings administration, and a former minister is now in jail. Two other ministers are also in jail for their role in causing financial loss to the state. Cabinet Ministers recently approved "Whistle Blowers" legislation for Parliament action, to encourage Ghanaian citizens to volunteer information on corrupt practices to appropriate agencies.

#### B. Bilateral Investment Agreements

Ghana has bilateral investment agreements with the following countries: the United Kingdom, Republic of China, Romania, Denmark, and Switzerland. These agreements, which were signed and ratified between 1989 and 1992, normally run for ten years. Italy and France are currently negotiating similar arrangements. Agreements with Germany, India, Pakistan, South Korea, North Korea, and Belgium are being considered. The U.S. signed three trade agreements between 1998 and 2000: the OPIC Investment Incentive Agreement, the Trade and Investment Framework Agreement (TIFA), and the Open Skies Agreement.

Ghana has met eligibility requirements to participate in the benefits afforded by the African Growth and Opportunity Act (AGOA), and also qualified for the apparel benefits under AGOA.

#### **1C. OPIC and Other Investment Insurance Programs**

OPIC is active in Ghana and OPIC officers visit Ghana periodically to meet with representatives of prominent American and Ghanaian firms. OPIC launched the Modern Africa Growth Fund and the Africa Infrastructure Investment Fund, which are sources of information and financing for investment in Ghana. The African Project Development Facility (APDF) and the African investment program of the International Finance Corporation are other sources of information. Ghana is a member of the Multilateral Investment Guarantee Agency (MIGA).

#### **1D. Labor**

Ghana has a large pool of inexpensive, unskilled labor. English is widely spoken, especially in urban areas. Labor regulations and policies are generally favorable to business. Labor-management relations are fairly good.

The new Labor law (Act 651) passed in 2003 became effective in March 2004. The new law unifies and modifies the old labor laws to bring them into conformity with the core principles of the International Labor Convention, to which Ghana is a signatory. All the old labor related laws, except the Children's law (Act 560), have been repealed.

Under the new Labor Law, the Chief Labor Officer will now issue collective bargaining agreements (CBA) in lieu of the Trade Union Congress (TUC). This effectively limits the TUC's monopoly, since the old CBA provisions implicitly compelled all unions to be part of TUC. Also, instead of the labor court, a National Labor Commission has been established which will be the medium for resolving labor and industrial issues. Finally, the Tripartite Committee that determines the minimum daily wage now has legal backing and public and private employment centers can be created to help job seekers find work.

There is no legal requirement for labor participation in management. However, joint consultative committees in which management and employees meet to discuss issues affecting business productivity are common.

There are no statutory requirements for profit sharing, but fringe benefits in the form of year-end bonuses and retirement benefits are generally included in collective bargaining agreements.

Consulting a local attorney with regard to labor issues is recommended. The U.S. Consulate in Accra maintains a list of local attorneys, which is available upon request.

#### **1E. Foreign Trade Zones/Free Ports**

A Free Trade Zone was established in May 1996. The free zone is a parcel of land near Tema Steelworks, Ltd., in the Greater Accra Region and two other sites located at Mpintsin and Ashiem, near Takoradi. The seaports of Tema and Takoradi, as well as the Kotoka International Airport, and all the lands related to these areas are a part of the free zone. The law also permits the establishment of single factory zones outside or within the areas mentioned above. Under the law, a company qualifies to be a free zone company if it exports more than 70 percent of its products. Among the incentives for free zone companies are a ten-year corporate tax holiday and zero duty on its imports.

To make it easy for free zone developers to acquire the various licenses and permits to operate, the Ghana Free Zones Board provides a "one-stop approval service" to assist in the completion of all formalities. A lack of resources has limited the effectiveness of the Board, however. To further facilitate operations in the zones, nationals of OECD countries, Canada, East Asian countries and the Republic of South Africa can, with advance notice, obtain entry visas at the airport. However, all foreign employees of businesses established under the program will require work and residence permits.

The contact address for the secretariat is as follows:

E-mail: freezone@africaonline.com.gh

#### F. Major Foreign Investors in Ghana

Major foreign investments in Ghana are mainly in mining and manufacturing. Britain is Ghana's main foreign investor with direct investment exceeding USD 750 million. Major U.S. investors are Volta Aluminum Co. (VALCO) Ltd., owned by Kaiser Aluminum and Alcoa, CMS Energy (independent power producer), Regimanuel Gray Limited (housing and construction), Boeing, Coca-Cola Company, Affiliated Computer Services (data processing), Pioneer Foods (Star-Kist tuna), Phyto-Riker (pharmaceuticals), Millicom (telecommunications) and Western Wireless (telecommunications). There has been recent interest by American companies in acquisition of state-owned communications and manufacturing firms slated for divestiture, as well as new investments in the telecommunications and agricultural sectors. Also, Newmont Mining announced a large investment in 2004.

There are significant investments by other foreign nationals made through the GoG privatization program. These include Norwegian interests in Ghana Cement Works (GHACEM), a cement manufacturing plant; Bau Nord AG (IBN), a Swiss company and the GoG-owned GAFCO; Walter Schroeder, a German company, and the GoG-owned West Africa Mills; Telekom Malaysia and Ghana Telecom. South African and Australian companies are active in the mining sector.

#### G. Foreign Direct Investment (FDI) Statistics

FDI statistics in Ghana tend to be unreliable since the promotion and monitoring of FDI in Ghana are carried out by several agencies without coordination in arriving at a total figure.

Since 1994, however, the Ghana Investment Promotion Center (GIPC) has registered over 1281 projects. GIPC provided the following statistics on registered private investments, which exclude mining, petroleum and free zones investments.

Foreign direct investment (FDI) (USD million)	
1994 Sep	1999 Dec
2000	114.91
2001	89.32
2002	58.93
2003	88.06
2004 (Jan ) Mar	20.52

\*\*\* These figures do not include investments in the mining and petroleum industries, which are the major recipients of FDI.

Between September 1994 and March 2004, the U.S. ranked fifth in terms of number of investment projects (120) after Britain (164), India (155), China (141), and Lebanon (122). The services and manufacturing sectors recorded the highest number of investment projects.
